

INHALATION THERAPY OF BRONCHIAL ASTHMA INTENSIFICATION ON THE STAGE OF FIRST MEDICAL AID

S. S. Soldatchenko, S. G. Donich, I. P. Ignatonis, Y. V. Rachko

Summery

The results of patients with bronchial asthma (BA) intensification nebulize therapy on the stage of first and emergent medical aid (FEMA) are presented in the article. It is set, that medical treatment of BA intensifications on the stage of FEMA by nebulizing salbutamol inhalations allows to decrease the amount of the FEMA teams re-callins on 9,5 %, and BA patients hospitalizations on 10,1 % in comparison with traditional injective and peroral application of bronholithics.
