

EFFICACY OF SPECIFIC IMMUNOTHERAPY IN ALLERGIC DISEASES OF UPPER RESPIRATORY TRACT OF THE 5-YEAR RETROSPECTIVE STUDY

I. V. Gogunskaya

Summery

As a result of the first in Ukraine 5-year retrospective study examined the effectiveness of specific immunotherapy for diseases of the upper respiratory tract. The results of SIT injection, oral and combined methods in 750 patients evaluated them as "excellent" and "good" in the group with perennial allergic rhinitis (83 % of surveyed), with seasonal allergic rhinitis (93 %) and in patients with seasonal and perennial allergic rhinitis with polysensibilization (84 %).
