

CLINICAL AND ANAMNESTIC CHARACTERISTICS OF SEASONAL ALLERGY WITH POLLEN-MOLD HYPERSENSITIVITY IN CHILDREN OF ZAPORIZHZHYA CITY

O.D. Kuznietsova

Summary. *Clinical and anamnestic peculiarities of seasonal allergy in dependence of the hypersensitization type (pollen or pollen-mold) are showed in this article. It is proved that in case of mold sensitization the course of bronchial asthma and allergic rhinitis is more severe and uncontrolled with the need of aggressive and prolonged therapy. The example of the anamnestic questions to find out from children with seasonal allergy and mold hypersensitization is given.*

Key words: *seasonal allergy, children, pollen-mold hypersensitization, anamnestic data.*
