

ASTHMA EXACERBATION MANAGEMENT – SIMPLY AND AVAILABLE

L. V. Yudina

In this article database of the use of inhaled glucocorticosteroids and short-acting bronchodilators for the treatment of exacerbation of bronchial asthma (BA) and their delivery via nebulizers is analyzed. A quick removal of asthma exacerbation by administering salbutamol and fluticasone propionate via Yulayzer Pro (ukrainian production nebulizer) on an outpatient basis is shown using the example of the particular clinical case. It was made a conclusion that it is feasible for patients to use nebulizer therapy to eliminate the aggravation of BA symptoms at home by using individual nebulizers.

Key words: *asthma, exacerbation, nebulizer therapy.*
