

NEW COMBINED INFUZIONNIY PREPARATION KARDIOTROPNOGO ACTIONS

L.G. Almakaeva, N.V. Begunova

Summary. Composition is certain and technology of preparation of a new combined medication on the basis of potassium and magnesium of asparaginat and taurin in the form of solution for infusion is developed. The optimum technological parameters of preparation of solution of preparation are certain. Stability of preparation at storage and use is explored. Advantages of the combined preparation on the breadth of spectrum and efficiency of kardiotonik action are exposed.

Key words: : *amino acid, potassium and magnesium of asparaginati, taurin, solubility, stability, technological parameters, cardiovascular diseases.*
