

THE DIFFERENTIATIVE APPROACH TO CHOICE OF THE INTENSIVE THERAPY IN PATIENTS WITH MULTIPLE TRAUMA

Ju.V. Volkova

Summary. The purpose of the investigation was search the more rational choice of the infusion solutions in complex of the intensive therapy of early period of the traumatic disease. This complex was directed on the improvement of reologic properties of the blood and microcirculation. We analyzed the results of treatment of 132 patients with multiple trauma. We showed the exponents of arterial pressure, central venous pressure, haematocrit, haemoglobin, mean corpuscular volume, mean corpuscular haemoglobin concentration and their dynamics of early period of the traumatic disease. We showed the exponents of parameters of haemodynamics with apply in complex intensive care Latren. With the help of our method we have got an opportunity more revolt the parameters that was studied.

Key words: *multiple trauma, microcirculation, Latren.*
