

# STIMULATION OF LYMPHATIC DRAINAGE BY OSMOTIC PREPARATIONS IN LUNG TUBERCULOSIS

*V. Djugostran, V. Zlepca, V. Antipa, A. Niguleanu,  
O. Calenda*

**Summary.** The efficiency of applying modified medical courses which included regional endolymphatic injections of Isoniazid, stimulation of interstitial-humoral transportation and enterosorption is presented. The results were compared to those of control groups. Sanation of lymphatic system accelerates elimination of basic clinical symptoms. Roentgenological, bacteriological results exceeded significantly those of control.

**Key words:** *tuberculosis, endolymphatic chemotherapy, lymphatic drainage, enterosorption.*
