

ON APPLICATION OF XILITOL SOLUTION FOR ENTERAL INSUFFICIENCY CORRECTION IN NECROTIZING PANCREATITIS

E.P. Konovalov, V.M. Rogovsky, A.O. Plyatsok

Summary. A concept of enteral insufficiency and its role at the development of necrotizing pancreatitis (NP) is discussed. Basing on their own experience of complex treatment of 28 patients who contracted severe necrotizing pancreatitis, the authors proved an expedience to use isotonic solution of Xilitol – Xilat while adapting the intestinal wall to the following enteral nutrition. An early tube enteral nutrition at NP is shown to be applicable to reliably prevent its septic complications, and to decrease a mortality - rate.

Key words: *enteral insufficiency, necrotizing pancreatitis, Xilat (solution), early enteral tube nutrition, pancreatic infection.*
