Summary. Efficacy, safety and tolerance to the "Lactoproteinum cum sorbitolo" as support therapy were assessed in 47 oncohematologic patients that received standard cytostatic therapy. An appraisal of optimal regimen of Lactoprotein with sorbitol was made on the basis of oncohematological clinic. Infusions of the drug were well tolerated, no side effect were noticed except hypersensibility to foreign protein, increased treatment efficacy, had positive influence on general condition of organism. We have come to a conclusion about expediency of "Lactoproteinum cum sorbitolo" use in standard therapy for oncohematological patients.

Key words: *lactoproteinum cum sorbitolo, standard cytostatic therapy, support therapy in oncohematology.*
