

**THE EFFECTIVE USE OF LATREN IN THE
DYNAMICS OF MEDICAL TREATMENT
OF CHRONIC OBSTRUCTIVE LUNG DISEASE
BACKGROUND OF TIREOIDAL
AND GLYOCOCORTICOIDAL DISBALANCE
OF OLDER AGE PATIENTS**

L.D. Todorico

Summary. Chronic obstructive lung disease with the functional indexes of lowered hormonal activity of the thyroidal gland in the dynamics of pathogenetic medical treatment of Latren is set equilibrium of thyroidal homeostasis, mainly due to renewal of thyrotropic function of hypophysis, growth of maintenance free thyroxine. Base therapy with the use of Latren predetermines decline of peripheral conversion of free thyroidal hormones, thanks to which, the level of thyroidal hormones goes down in plasma of blood of older age patients. In the dynamics of medical treatment at all clinical-pathogenetic variants of disease the level of antibodies does not test the substantial changes to thyroperoxidase.

Key words: *chronic obstructive lung diseases, thyroidal dysfunction, cortisol, thyrotropic hormone, Latren.*
