

EVALUATION OF EFFICACY OF TIVORTIN IN COMPLEX THERAPY OF INTRAUTERINE GROWTH RETARDATION

C. D. Mikirtichev, Kim En Ding

Summary. The studies found that the use of Tivortin (L-arginine) in the treatment of patients with preeclampsia varying severity improves blood flow in the utero-placental-fetal complex, reduces endothelial dysfunction and contributes significantly to the growth rate of the fetus and its functional state that can prolong pregnancy to the optimal timing of delivery.

Keywords: *endothelium, endothelial dysfunction, fetal development, pre-eclampsia, treatment, Tivortin.*
