

DIABETIC NEUROPATHY AND ITS ROLE IN DEVELOPMENT OF DIABETIC FOOT

A. V. Prisajnyi

Summary. The paper presents a review of literature on the pathogenesis, diagnosis and treatment of diabetic foot syndrome (DFS). Timely prophylaxis of endothelial dysfunction significantly reduces the risk of diabetic ulcers. Successful treatment depends on the concerted action of all professionals involved in treating of the lower limbs lesions in diabetes.

Keywords: *diabetic foot syndrome, endothelial dysfunction, diabetic neuropathy.*
