

FEATURES OF NEUROPHYSIOLOGICAL PHENOMENA TO PREDICT COGNITIVE FUNCTIONS IN PATIENTS WITH VASCULAR PATHOLOGY

A. G. Oleksyuk-Nekhames

Summary. In patients with ischemic insult combining standard regimen of taking the drug L-arginine - Tivortin and Tivortin aspartate («Yuria Farm», Ukraine) – likely to positively affect the recovery of cognitive function in the rehabilitation period. In these patients for screening study of cortex and assess the course of the rehabilitation period, it is reasonable to determine the parameters caused by somato-sensory potentials.

Key word: *Tivortin, L-arginin, evoked somato-sensory potentials, elektroneymyography, insult.*
