

**PECULIARITIES OF, DIAGNOSIS
AND THERAPY PLACENTAL DYSFUNCTION
IN VARICOSE**

N. A. Boyko

Summary. The paper analyzes the current approaches to diagnosis, prevention and therapy of placental insufficiency, including against varicose veins. Studied the efficacy of L-arginine – Tivortin and Tivortin aspartate – in the complex therapy of patients with placental dysfunction. Based on these results, the authors recommend that all pregnant women with varicose be prevented placental dysfunction by Tivortin aspartate, based morphologically confirmed by reducing compensatory responses of placenta.

Keywords: *placental dysfunction, varicose, L-arginine, Tivortin, endothelial dysfunction, nitric oxide.*
