

**REOSORBILACT IN THE COMPLEX TREATMENT
OF THE «WOUND FROZEN» SYNDROME
IN PATIENTS WITH DIABETIC FOOT**

A. V. Ivashchenko

Summary. In the combined treatment of 15 patients with complicated diabetic foot syndrome and sluggish wound healing by intra-arterial injection through the descending artery of the knee, we used Reosorbilact. To treat the other 15 patients with similar changes by Rheopolyglucini was used. We found a more pronounced regenerative effect by intra-arterial injection of Reosorbilact in patients with «wound frozen» syndrome and diabetic foot compared with Rheopolyglucini.

Keywords: *diabetic foot syndrome, frozen wounds, Reosorbilact, treatment.*
