

**THE CHOICE OF PERIOPERATIVE
CARDIOPROTECTIVE MODE
OF INFUSION THERAPY IN SURGICAL PATIENTS
WITH COMORBID CARDIAC PATHOLOGY**

A. I. Tsivenko, A. L. Lyashok

Summary. The options of intraoperative fluid therapy in patients with ischemic artery disease and heart failure have been reviewed in the article. It has been demonstrated on the strength of hemodynamics parameters, ECG, biomarkers of myocardial ischemia and heart failure that the use of low-volume fluid therapy with the combination of crystalloid and colloid solutions is the most advisable.

Keywords: *perioperative fluid therapy, ischemic heart disease, heart failure.*
