

# DRUG ALLERGY IN TUBERCULOSIS PATIENTS

*B.M. Puhllik, M.A. Tkhorovsky,  
M.I. Gorbatyuk, V.B. Rusanova*

## *Summary*

The drug allergy (DA) in tuberculosis patients has been an urgent problem at present since its prevalence increased in anti-tuberculosis centers increased from 11,6 % to 17,8 %. In order to improve the simplest diagnostic method of DA - skin test - the method based on an application of the set, including special dissolving liquid with albumin, the control histamine solution and original lancets, have been used. This technique gave us the opportunity to increase effectiveness of skin diagnosis of DA in tuberculosis patients.
