

# EUPHYLLINE: NOVEL TECHNOLOGIES — BETTER SAFETY

***Yu.I. Feshchenko, V.V. Smirnov***  
***O.P. Viktorov, L.O. Gromov***

## *Summary*

The most important adverse reactions of methylxantines (short-acting theophylline), caused by ethylenediamine (used for better stabilization and solubility of theophylline) are listed. The efficacy of domestically produced theophylline — Euphylline-N-2000 — formulated without ethylenediamine, has been confirmed.
