

QUALITY OF LIFE INDICES IN ASTHMA PATIENTS AND CONCOMITANT PSYCHOEMOTIONAL STATES

T. V. Konstantinovich-Chichirello

Summary

The article presents the results of the own study, which illustrates the prevalence and severity of concomitant psychoemotional conditions in asthma patients and their effect on the quality of life parameters. It is shown, that the asthma patients have higher statistically significant indices of psychoemotional dysfunction in comparison with the healthy persons. The quality of life of asthma patients strongly depends on the influence of concomitant psychoemotional factors.
