

TUBERCULOSIS PLEURISY: EPIDEMIOLOGICAL AND CLINICAL-PATHOLOGIC ASPECTS, MODERN STATE OF THE ART IN UKRAINE

I. V. Liskina

Summary

Several modern epidemiological indices and tendencies of tuberculosis pleurisy prevalence were presented, depending on sex and age of the patients in the light of presence of a tuberculosis epidemic in Ukraine. These indices were compared with similar ones for the population of other countries. The basic distinctive clinical-anatomic features of tuberculosis pleurisy were described. The analysis tuberculous pleurisy and empyema was carried out.
