

# TREATMENT OF PATIENTS WITH COR PULMONALE

*V. K. Gavrisyuk*

## *Summary*

The author has presented basic causes of blood circulation disturbances in patients with cor pulmonale. The principles of the therapy, based on administration of diuretics, broncholytics, medicines, improving blood rheological properties and stimulating myocardium contractility, have been highlighted. The author has considered as a perspective the use multifunctional medicines — sorbilact, rheosorbilact, omega-3 polyunsaturated fatty acids, fensperide — in therapy of these patients.
