

# THE FREQUENCY, STRUCTURE, POSSIBILITIES OF DIAGNOSTICS AND PROPHYLAXIS OF THE DRUG ALLERGY IN CHILDREN WITH TUBERCULOSIS

***S. V. Zaykov, L. M. Kirichenko***

## *Summary*

Some aspects of drug allergy in children with tuberculosis have been studied. The rate of drug allergy in these patients reached 5,72 % and tended to further increase. A list of the drugs more frequently causing allergic reactions have been presented. It is necessary to organize in antituberculous institutions the proper prevention, diagnostics and treatment of drug allergy in order to meet modern requirements.
