

TUBERCULOSIS IN CHILDREN AND ADOLESCENTS IN UKRAINE. EPIDEMIOLOGICAL INDICES FOR 10 YEARS

Yu. I. Feshchenko, O. I. Bilogortseva

Summary

Epidemiological data on tuberculosis in children are presented in this article. Basic epidemiological indices and the quality indices of healthcare service for the last 10 years have been demonstrated. There have been underlined the negative trend of growing prevalence of severe forms of disease among children during 9 months of 2005. The proposals, aimed on improvement of anti-tuberculosis service in children of Ukraine, have been worked out.
