

# INCIDENCE AND LETHALITY IN PATIENTS WITH TUBERCULOSIS IN COMBINATION WITH HIV INFECTION AND AIDS

***V. P. Melnyk, T. G. Svitlychna***

## *Summary*

We examined 280 patients with tuberculosis in combination with HIV/AIDS. It was revealed the annually growing incidence of both tuberculosis (4–10 %) and AIDS (10–15 %), and HIV/AIDS-associated tuberculosis (from 0,22 to 3,3 per 100 thousands population). The proportion of the younger patients (40–60 %) increases each year. High lethality was found (30 %) in patients with tuberculosis and HIV/AIDS during first two year diagnosing of HIV-infection.
