

PECULIARITIES OF CHRONIC OBSTRUCTIVE PULMONARY DISEASE IN WOMEN OF DIFFERENT AGE GROUPS, IN ASSOCIATION WITH HORMONE PROFILE

T. O. Pertseva, G. A. Garagulya

Summary

The data on hormone profile of women, suffering from COPD, have been presented in this article. The estrogens predominance was revealed by indirect signs in women with COPD. It has been revealed that Tybolon, included in complex therapy of women with COPD, considerably improved the course of exacerbations and relived a general state of health of the patients.
