

THE PRACTICE OF THE USE OF FROMILID® UNO IN MODERN THERAPY OF ALLERGIC CONDITIONS

O. M. Gyrina, P. V. Grishylo, L. D. Vityk

Summary

The difficulties of antibacterial therapy are mainly determined by variety of pathogens, their different susceptibility (even within one specie) and variability, the condition of macroorganism (immunity status, age, concomitant diseases), difficult isolation and identification of pathogenic microorganisms, high prevalence of mixed infections etc. In allergologist's practice the administration of antibacterial medications happens more often now. Fromilid® uno occupies leading place in therapy of asthma, atopic dermatitis, urticaria, complicated allergic rhinitis.
