

# THE ROLE AND PLACE OF N-ACETHYL CYSTEINE IN TREATMENT OF MODERATE AND SEVERE CHRONIC OBSTRUCTIVE PULMONARY DISEASE

*A. I. Yachnik*

## *Summary*

The results of application of N-acetylcysteine (ACC-200 by SANDOZ) in 40 patients with moderate and severe COPD for 8 weeks demonstrated an improvement of spirometry indices ( $FEV_1$ ), stabilization of clinical condition, improvement of physical activity and decrease of dyspnea, decrease in exacerbations frequency in patients with severe COPD and good tolerance of the medicine.
