

DYNAMICS OF TUBERCULOSIS MORTALITY IN KHERSON REGION

*V. M. Buryatynskiy, G. V. Koval,
T. M. Lenchevska, O. M. Panchenko*

Summary

There was analyzed the tuberculosis mortality in Kherson region which appeared to be higher than average one in Ukraine. There was demonstrated that the mortality was influenced by non-registered tuberculosis cases (those subjects who were not under the observation of anti-tuberculosis institutions).

Finding of tuberculosis during the autopsy as well as a death, caused by tuberculosis soon after the diagnosing, suggest the limitations in organization of timely detection of the disease.
