

# HEALTH-RELATED QUALITY OF LIFE IN PATIENTS WITH IDIOPATHIC INTERSTITIAL PNEUMONIAS

*S. I. Leshchenko, N. E. Monogarova,  
V. V. Polishchuk*

## *Summary*

The aim of this study was to investigate quality of life of 112 patients with idiopathic interstitial pneumonia. The questionnaire MOS SF-36 has shown decrease of quality of life of patients with idiopathic interstitial pneumonia which correlated with other studies. This questionnaire was simple and informative to estimate the quality of life. It may be recommended for follow-up of the patients with idiopathic interstitial pneumonias.
