

PECULIARITIES OF SUBPOPULATION SPECTRUM OF T- AND B-LYMPHOCYTES IN PERIPHERAL BLOOD OF PATIENTS WITH CHRONIC OBSTRUCTIVE PULMONARY DISEASE

P. R. Gerich, M. M. Ostrovskiy

Summary

The data concerning pathogenesis of immune response during exacerbation of stage II chronic obstructive pulmonary disease (COPD) have been presented. The results of the study demonstrated significant role of T-and B- lymphocyte subpopulations in the processes of both local and systemic manifestations of COPD.
