

# TREATMENT OF PATIENTS WITH BRONCHIAL ASTHMA IN COMBINATION WITH SOMATO-PSYCHOLOGICAL SYNDROMES

***T. V. Konstantinovich***

## *Summary*

The article is dedicated to the use of psychotropic medicines in patients with bronchial asthma (BA) (out-patient treatment). A main group consisted of 50 BA patients, among which 28 persons along with maintenance therapy used anti-anxious preparation afobazol (AF) 10 mgs three times daily and 21 — cerebral protective preparation of pyracetam/tiotriazolin (PT) 0,4/0,1 mgs three times daily. A control group consisted of 28 patients on maintenance therapy only. The regimen of therapy with AF was 4,3 times more effective, and the regimen with PT — 2 times more effective, than maintenance therapy alone.
