

CORRELATION OF BLOOD PRESSURE INDICES AND SLEEP DISTURBANCE BREATHING INDICES IN PATIENTS WITH SLEEP APNEA AND ITS COMBINATION WITH COPD

Yu. N. Sirenko, K. V. Miheeva

Summary

Aim of the study was to find links between blood pressure and sleep disturbed breathing in patients with sleep apnea and its combination with COPD.

We found that in patients with sleep apnea all main blood pressure indices correlated with respiratory disturbance index and desaturation index, and in patients with mixed pathology all main blood pressure indices correlated with minimal oxygen blood saturation.
