

EPIDEMIOLOGICAL SITUATION FOR HIV-INFECTION AND HIV-ASSOCIATED TUBERCULOSIS IN CHILDREN AND ADOLESCENTS IN UKRAINE FOR THE PERIOD OF 2006-2009 YEARS

O. I. Bilogortseva, N. V. Symonenkova, I. L. Ruban, O. V. Stopolianskyi, S. V. Strygul, Ya. I. Dotsenko, M. A. Volyk

Summary

The data, reflecting the epidemiological situation for HIV-infection and co-infection of tuberculosis and HIV among children in Ukraine have been presented in current article. An increase in number of HIV-infected women of childbearing age, children born by them and increase in incidence of tuberculosis among HIV-infected children have been demonstrated. Authors concluded that there was a necessity of improving tuberculosis care for children born by HIV-infected mothers.
