### *Summary*

The article presents the evaluation of the epidemiological situation for tuberculosis and the results of the effectiveness of tuberculosis treatment, based on cohort analysis, for the period of 2006-2010 years. It has been demonstrated that epidemiological indices became stable or even improved since 2006 till 2010. Certain discrepancy between treatment effectiveness, assessed using cohort analysis, and WHO' indicators has been found. An important measures, aimed on increasing effectiveness of treatment, further anti-tuberculosis network facilitation and improvement of the epidemiological situation of tuberculosis have been outlined.
