

PROBLEMS AND SOME APPROACHES TO HEALTH CARE SYSTEM AND TB SERVICE REFORMING IN UKRAINE

Yu. I. Feshchenko, V. M. Melnyk, V. G. Matusevych, I. A. Novozhylova

Abstract

Evaluation of pilot projects carried out in some areas, showed conflicting data on the effectiveness of the reform. The existing Soviet system of TB service can not adapt to the new conditions, in particular, to an increase in the frequency of drug-resistant tuberculosis and co-infection of TB/HIV/AIDS and others. An existing approach of care, focused on in-patient care, inadequate organization of TB detection and ineffective treatment provision, need to stimulate industry personnel, and some others remain the real challenge. That is why there is a need to reorganize, restructure and reform the TB service. It is necessary to use experience of developed countries, which utilize minimum infrastructure and available human resources.

Key words: tuberculosis, treatment, detection, TB service, reforming.
