Abstract

Current methodical recommendations are devoted to the topical problem of the improvement of treatment effectiveness in patients with pulmonary sarcoidosis. The modern postulates of corticosteroid and immunosuppressive therapy of sarcoidosis patients, as well as the algorithm of personified treatment, considering the contraindications, tolerance and resistance to corticosteroids and response to treatment in each given case, are reflected.

The algorithm presented is based on Unified clinical protocol for provision of primary, secondary (specialized) and tertiary (highly specialized) medical care on Sarcoidosis, adapted evidence-based clinical guidelines on Sarcoidosis, developed by current authors, ATS, ERS and WASOG "Statement on Sarcoidosis (1999), and authors's many years experience.

Key words: pulmonary sarcoidosis, treatment, algorithm of personified therapy.
