

# MAIN CLINICAL SYNDROMES IN OCCUPATIONAL RESPIRATORY TRACT DAMAGE

**V. S. Tkachyshyn**

*Abstract*

Among all known occupational diseases, a significant proportion is made up of respiratory system conditions, caused by the negative impact of harmful production factors.

The article provides a classification scheme for occupational respiratory diseases depending on the underlying etiological factor. The official distribution of occupational respiratory diseases is carried out in accordance with the Resolution of the Cabinet of Ministers of Ukraine dated 08.11.2000 No. 1662 "On Approval of the List of Occupational Diseases".

The main syndromes of respiratory tract damage inherent in occupational respiratory diseases are presented.

The following syndromes are considered: pain, ulcerative-necrotic, hemorrhagic, hypersecretory, inflammatory, edematous, pulmonary arterial hypertension, obstructive, pulmonary infiltrate, pleural effusion, pulmonary dissemination, dyspnea, hyperinflation, degenerative-dystrophic changes, respiratory failure, exposure and elimination.

**Key words:** respiratory tract damage, main clinical syndromes, occupational pathology.
